Can audiovisual archiving be green?

Tuesday October 4th / 4:30pm to 6:00pm

According to the World Meteorological Organization, the last seven years are the warmest on record and all over the world, natural disasters linked to warming are increasing. Climate change and environmental damage make the ecological transition more necessary and urgent every day.

Like any human activity, archiving has an environmental impact. How exactly should it be evaluated? How is it possible to reduce it? How do professionals in audiovisual archives tackle these issues? How can they be reconciled with conservation and communication missions?

Audiovisual archives must take up the environmental challenge. This workshop proposes to engage together a reflection on this issue.

It will also include the launching of a survey, in collaboration with FIAT/IFTA, to assess the level of awareness of professionals on the subject and identify the actions that have been taken by the various stakeholders of audiovisual archiving around the world.

Programme

4:30 pm	INTRODUCTION
4:40 pm	ROUND TABLE
5:25 pm	INTERACTIVE WORKSHOP
5:50 pm	CONCLUSION
